Project Initialization and Planning Phase
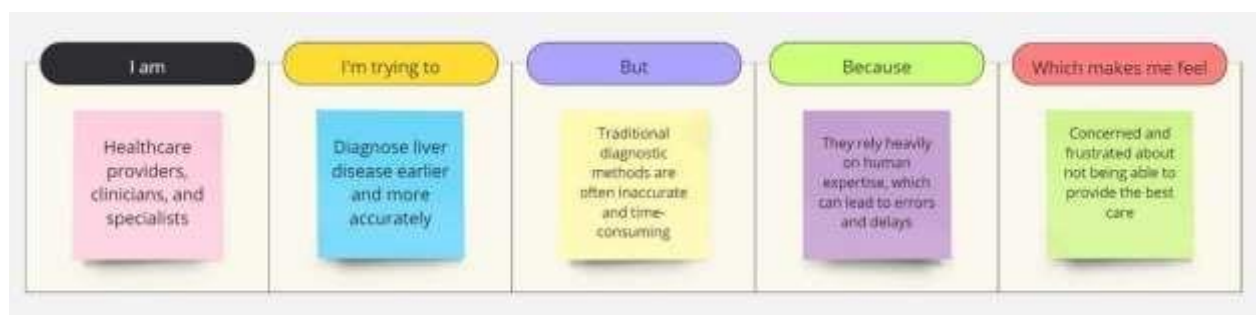

Date	1 july 2024
Team ID	739651
Project Name	Prediction and Analysis of Liver Patient Data Using Machine Learning
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel

(PS)					

Accurate diagnosis and prognosis of liver disease are critical for effective patient management and treatment. Current diagnostic methods often lack precision and consistency, leading to delays and potential errors in identifying liver conditions. These inaccuracies can result in suboptimal treatment plans, negatively affecting patient outcomes and quality of life. By leveraging advanced machine learning techniques, we aim to enhance the accuracy and reliability of liver disease diagnostics. This improvement will enable healthcare providers to develop more effective, personalized treatment plans, ultimately improving patient outcomes and optimizing the use of medical resources.

PS-1	Healthcare providers, clinicians, and specialists	Diagnose liver disease earlier and more accurately	Traditional diagnostic methods are often inaccurate and time consuming	They rely heavily on human expertise, which can lead to errors and delays	Concerned and frustrated about not being able to provide the best care
